

Dimas Deffieux

06 08 83 61 04 | dadeffieux@gmail.com | www.linkedin.com/in/dimas-deffieux | <https://github.com/chordeaux>

EDUCATION

CentraleSupélec and McGill University

Gif-sur-Yvette, France and Montréal, Canada

Bachelor of Global Engineering, Ongoing

GPA: 4.0 Relevant coursework: Algorithms, Differential Calculus, Probability, Group Programming Competition, Linear Algebra

The Village School (2021-2025)

Houston, Texas, USA

IB Diploma, Computer Science Honors Society (2x Best Programmer award), Founder of Coding Club, VP of Table Tennis club

EXTRA-CURRICULAR INVOLVEMENT

Automatants – Technical Member (Pole Geek)

October 2025 – Present

ViaRezo – Technical Developer (Pole Dev)

September 2025 – Present

Bureau des Bachelors – VP of IT

February 2026 – Present

PROJECTS AND EXPERIENCE

SLB (Schlumberger) – Software Engineering Intern (*Incoming*)

June 2026 - July 2026

- Building an internal SharePoint chatbot using RAG for the Electrical Métier division.

ViaRezo WiFi Support Chatbot (*Ongoing*)

November 2025 – Present

- Designing and deploying a generative AI chatbot using **Ollama** and **FastAPI** for a student-led ISP serving over **2000** users
- Building a **RAG** pipeline with **ChromaDB** to ground responses in technical support documentation, ensuring model outputs remain faithful to source material and reducing hallucinated responses.
- Implementing an async task queue using **Redis** and **ARQ** to manage inference requests to a self-hosted LLM.
- Replaced a legacy email-based support workflow where response times often exceeded **24 hours**, reducing them to **seconds**.

Bureau des Bachelors Web Infrastructure Overhaul (*Ongoing*)

February 2026 – Present

- Conducting a full-stack overhaul focused on writing sophisticated, maintainable code with clear documentation, replacing a disorganized legacy codebase to enable smooth handoffs to incoming developers.
- Streamlining web infrastructure by migrating from a fragmented PHP setup to a modular **Next.js** backend, reducing separately hosted websites from **4** to **2**.
- Redesigning website and functionality, integrating event signups, member subscription management, and admin functionalities.
- Enhancing database efficiency by optimizing dataflow and sunseting unused features.

English-French Transformer Translation Model

October 2025 – February 2026

- Built a translation model from scratch using the Transformer architecture in **PyTorch**, with **HuggingFace** tokenizers for data preprocessing.
- Implemented multi-head self-attention, positional encoding, and full encoder-decoder architecture with greedy and beam search decoding
- Developed complete end-to-end pipeline of model from data preprocessing, architecture definition, training loop, and evaluation.

Community Forum Web App (*Course Project*)

March 2023 – April 2023

Built a full-stack community forum in Java using Jakarta Servlet, MySQL, and GlassFish, implementing MVC architecture

SKILLS & INTERESTS

- ML/AI: PyTorch, HuggingFace, RAG, Ollama, TensorFlow, Keras, scikit-learn, matplotlib, pandas, NumPy.
- Web: Java, FastAPI, Next.js, React.js, Jakarta Servlet, JavaScript, HTML/CSS, MySQL, MVC Architecture.
- Tools: Git, Linux, Python.
- Languages: English (Native), French (Native), Korean (Intermediate-High), Japanese (Limited).
- Interests: Multilingual NLP, Research, AI/Machine Learning, Software development, Language acquisition, Weight training, Calisthenics.
