Education

CentraleSupélec & McGill University Ongoing
Gif-sur-Yvette, France & Montréal, Canada

- Bachelor of Global Engineering. GPA: 3.33
- Relevant coursework: Algorithms, Differential Calculus, Probability, Group Programming Competition, Linear Algebra.

The Village School 2021–2025
Houston, Texas, USA

- IB Diploma. Computer Science Honors Society (2× Best Programmer award).
- VP of Table Tennis Club.

Projects & Experience

C++ Neural Network Sep 2026 – Present
Ongoing

- Collaborating with a classmate to develop a modular neural network from scratch in C++
- Implementing backpropagation, as well as other algorithms and functions related to networks
- Designing the system in a way facilitate easy additions of different types of layers and activations to maximize versatility

SLB (Schlumberger) – Software Engineering Intern Jun 2026 – Jul 2026

- Designed an agentic chatbot system to search efficiently through internal SharePoint Documents
- Practiced system design principles to provide effective results catered to requirements given through interviews with managers
- Implemented system with Microsoft Copilot Studio to improve modularity and maintainability for the less technical department after my departure, in addition for integration with already in place M365 architecture
- Improved AI fluency among the department by providing a simple prompt engineering guide, and consulting some workers on how to automate and leverage AI

Bureau des Bachelors – Web Infrastructure Overhaul Feb 2026 – Present
Ongoing

- Conducting a full-stack overhaul focused on sophisticated, maintainable, well-documented code, replacing a disorganized legacy codebase to enable smooth handoffs to incoming developers.
- Streamlining web infrastructure by migrating from a fragmented PHP setup to a modular Next.js backend, reducing separately hosted websites from 4 to 2.
- Redesigning website and functionality, integrating event signups, member subscription management, and admin functionalities.
- Enhancing database efficiency by optimizing dataflow and sunsetting unused features.

English-French Transformer Translation Model Oct 2025 – Feb 2026

- Built a translation model from scratch using the Transformer architecture in PyTorch, with HuggingFace tokenizers for data preprocessing.
- Implemented multi-head self-attention, positional encoding, and a full encoder-decoder architecture with greedy and beam search decoding.
- Developed the complete end-to-end pipeline: data preprocessing, architecture definition, training loop, and evaluation.

Community Forum Web App Mar 2023 – Apr 2023
Course Project

- Built a full-stack community forum in Java using Jakarta Servlet, MySQL, and GlassFish, implementing MVC architecture.
- Implemented basic CRUD functions for managing posts and comments on the forum

Extra-Curricular Involvement

CStudio – Developer September 2026 – Present

- Working in a team to develop games in C using the Unity engine
- Currently developing a 2D VS/Co-op platformer arcade game in cooperation with the CentraleSupélec's robotics club

Automatants – Technical Member Oct 2025 – Present
Pole Geek

ViaRezo – Technical Developer Sept 2025 – Present
Pole Dev

- Attended trainings to improve knowledge in infrastructure (Datadog overview, Firewalls)

Bureau des Bachelors – VP of IT Feb 2026 – Present

Skills

ML/AI: PyTorch, HuggingFace, TensorFlow, Keras, scikit-learn, matplotlib, pandas, NumPy.

Web: Java, Jakarta Servlet, JavaScript, HTML/CSS, MySQL, MVC Architecture.

Tools: Git, Linux, Python.

Languages: English (Native), French (Native), Korean (Estimated TOPIK 3), Japanese (Estimated N4).

Interests

Multilingual/Low-Resource NLP, Research, AI/Machine Learning, Software development, Language acquisition, Weight training, Calisthenics, Mechanical Keyboards.
